THE WALL STREET JOURNAL

TJX agrees to \$41 million settlement with Visa

Embattled retailer TJX Companies – the parent of TJ Maxx, Marshalls and other well-known outlets – has agreed to a nearly \$41 million settlement with Visa.

The \$40.9 million settlement will fund payments to banks that issue Visa payment cards and were affected by the massive breach that is widely believed to have

The Washington Post

TJXs profits are starting to crumble under the weight of the massive data breach, according to a filing this week with the U.S. Securities and Exchange Commission.

SC

The filing reveals that the Framingham, Mass.-based discount retail chain's net income sharply fell in this year's second quarter compared to the same period last year, from \$138

The Access Denied Systems Solution will:

- Remove the "security responsibility" from irresponsible users.
- secure your data both in-house and on portable devices such as laptops.
- authenticate users by fingerprint, eliminating the need for passwords and cost associated with lost, stolen or changing passwords.
- Provides multi-factor security to control threat of insider/employee data theft.
- Enhances customer confidence around securing personal and financial

Internal data security threats are no longer just an IT issue, but a business survival issue

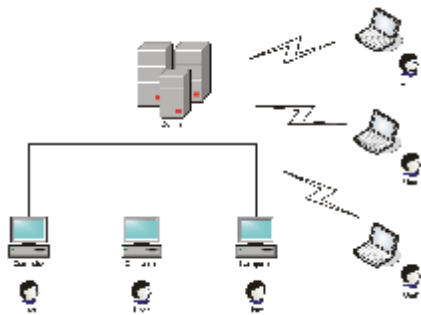

Today organizations like yours' are falling victim to data losses at an alarming rate. Security experts predict these data losses will only increase. This trend, in turn, significantly amplifies the financial risk facing your organization. Protection is the key and Crystal IT provides the most reliable and complete data loss prevention solution protects your entire computer system from data losses regardless of where the attack originates and safeguards your organization from

In the year 2006, the insurance institute publicized the fact that 1.2 million laptops were reported missing during the previous year.

During the first month of 2006, Orange County airport reported over 200 laptops had been left at the TSA security screening area. This is just one, relatively small, airport and over a period of one month.

Every day you hear about companies from every industry and every location being breached and client data is stolen, or company proprietary information is taken.

Collages, hospitals, garment manufacturers, stock brokers, banks, retail stores, gyms, athletic clubs, manufacturers, the list goes on - even governments are not impervious to this trend, in November of 2007, 25 million records turned up missing from a department of the Government of the UK. That same day, data went missing from the Canadian health department about HIV and AIDS patients. (Remember, they have

Every Part of Your Computer Network Is Protected

The Solution

The Solution Consists of Four Parts;

1. The workstation endpoint utilizing both RF technologies and biometrics to authenticate your users and keep unauthorized people out of your computer system. The use of Biometrics (in the form of a fingerprint scan) authenticates the user and assures you that the system integrity is at the highest level.
2. The encryption of your hard drives to protect the contents in the event that your system is compromised through a rouge email worm, virus, malware or your firewall is breached. The encryption of your system, including your laptops, protects your data from being compromised in the event your computer is lost or stolen.
3. The use of the Enterprise software system makes the management of both the workstation logical access controls and the encryption system easy and accessible from any authorized workstation.
4. Support before and after the sale to minimize the effort of implementing the solution and maximize the protection of your data.

Our solutions protect both small companies and large government

Key Benefits

- Market Leader in Data Loss Prevention
- Multiple Technologies within a Single Solution
- Cost-effective for Short-term ROI
- Easy to Implement
- Transparent to the User
- Increases Employee Productivity
- One Year of Updates and Support
